

Congratulations on your Voron 0 build.

Your parts have now arrived and you are no doubt excited to begin assembly. Please note that these parts are unfinished. While they usually work fine as is, it can be helpful to pre-pull nuts into their respective spots before assembly. This can be accomplished by using an M3/M5 bolt and using it to pull the nuts into a seated position.

If you have any questions, be sure to ask in the appropriate build help channels. We have an amazing community of people that are all too willing to help if you run into roadblocks. If you have any questions about specific parts that you have received, please feel free to contact me directly and I'll do my best help.

The build manual for your printer can be found via the QR code below.
